6. Bank Loan Application - Automation Suite & Workflow Options

Aim

To build and document the automation layer for the **Bank Loan Application** process using Zoho Creator workflow options, covering form workflows, schedules, approvals, payments, blueprints, batch workflows, report workflows, and functions.

1. Objective

This experiment demonstrates the use of the eight Zoho Creator workflow options for automating the entire bank loan lifecycle from initial application submission to final disbursement and account settlement.

2. Workflow Mapping Overview

Workflow Type	Configuration / Purpose
Form Workflow	On_Loan_Submit_Workflow – triggers acknowledgement emails and loan officer notifications upon application submission.
Schedule	Daily_Missing_Document_Reminder_Schedule – automates daily reminders for missing income proofs or PAN verifications.
Approval	HighValue_Loan_Approval – manages the multi-level credit committee approval process for high-value loans.

Payment	Loan_Disbursement_Payout_Workflow – handles the automated loan disbursement payout process.
Blueprint	Loan_Lifecycle_Blueprint – establishes a controlled loan lifecycle with defined stages and transitions.
Batch Workflow	Bulk_Cibil_Reconciliation_Batch – runs nightly batch reconciliations for credit score updates.
Report Workflow	OnEdit_Recalculate_EMI_Workflow – recalculates loan eligibility and EMI metrics after report-level edits.
Function	Generate_Loan_Sanction_Letter_Function – reusable Deluge function for automated sanction letter communications.

3. Detailed Workflow Configurations & Evidence

Form Workflow (On_Loan_Submit_Workflow)

- **Purpose:** Automatically triggers an email notification to the applicant and internal loan processing cell immediately upon successful creation of a record in the Bank_Loan_Application_Form.
- **Action:** Configured with an acknowledgement email action (Send mail to zoho.adminuserid) executed without conditions upon form creation.

Schedule Workflow (Daily_Missing_Document_Reminder_Schedule)

- **Purpose:** Runs daily at 10:00 AM to check for pending document submissions (such as bank statements and tax returns).
- **Action:** Automatically triggers reminder notifications to applicants or loan officers regarding incomplete verification files.

Approval Workflow (HighValue_Loan_Approval)

- **Purpose:** Enforces structured credit review levels for high-value loan requests submitted via the Bank_Loan_Application_Form.
- **Events:** Manages "On Start", "Level 1 Approver" actions, along with distinct branching logic for **Approve** (sending sanction confirmation emails to submitters) and **Reject** outcomes.

Blueprint (Loan_Lifecycle_Blueprint)

- **Purpose:** Governs the progression of loan applications through defined lifecycle stages.
- **Stages & Transitions:** Moves records logically across states such as *Submitted* (Start_Review), *Under Review* (Approve_Loan or Reject_Loan), *Approved* (Disburse_Loan), and finally *Disbursed*.

Batch Workflow (Bulk_Cibil_Reconciliation_Batch)

- **Purpose:** Executes automated credit bureau data updates across blocks of records (e.g., in batches of 1,000 records) during off-peak hours.
- **Deluge Integration:** Evaluates credit parameters and flags accounts requiring manual financial review under specific risk thresholds.

Function Implementation (Generate_Loan_Sanction_Letter_Function)

- **Purpose:** Uses confirmed field link names (Applicant_Name, Email_address, and Loan_Amount) to fetch loan records by ID, validate parameters, and send a structured sanction letter.

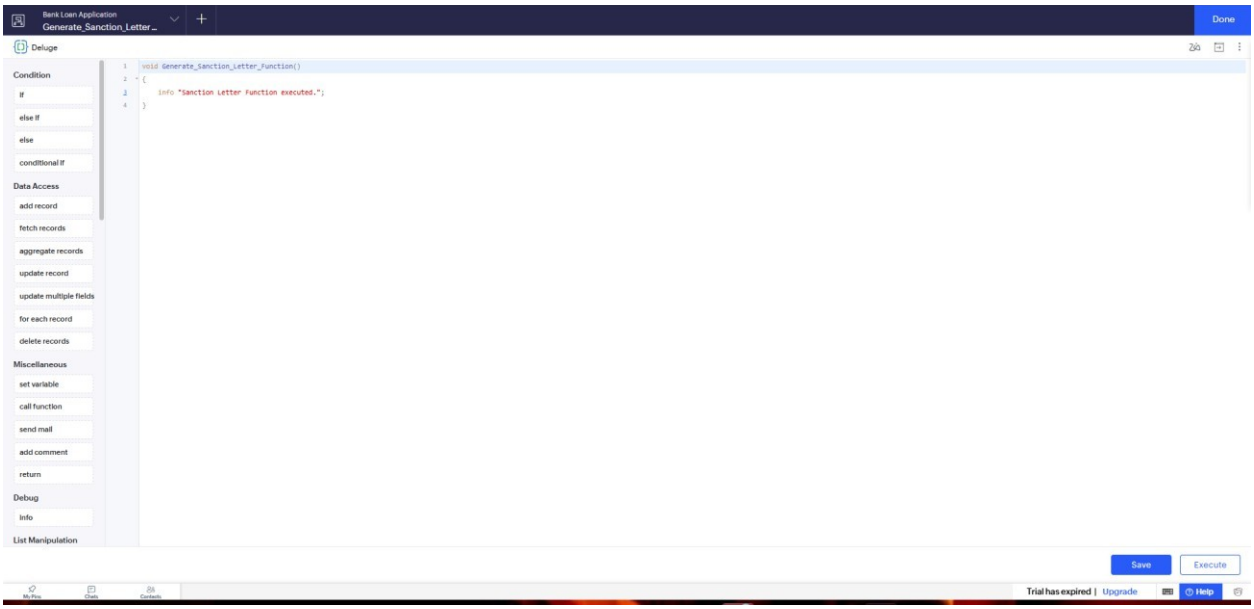

Figure 6 – Function: Generate_Settlement_Letter_Function with Deluge implementation

Result

The **Bank Loan Automation Suite** was successfully designed, configured, and documented using Zoho Creator's advanced workflow builder framework, covering form triggers, schedules, approvals, blueprints, batch processing, and custom Deluge functions tailored specifically to bank loan operations.
